Place of observation :

La Bégude de Mazenc

Other facts :

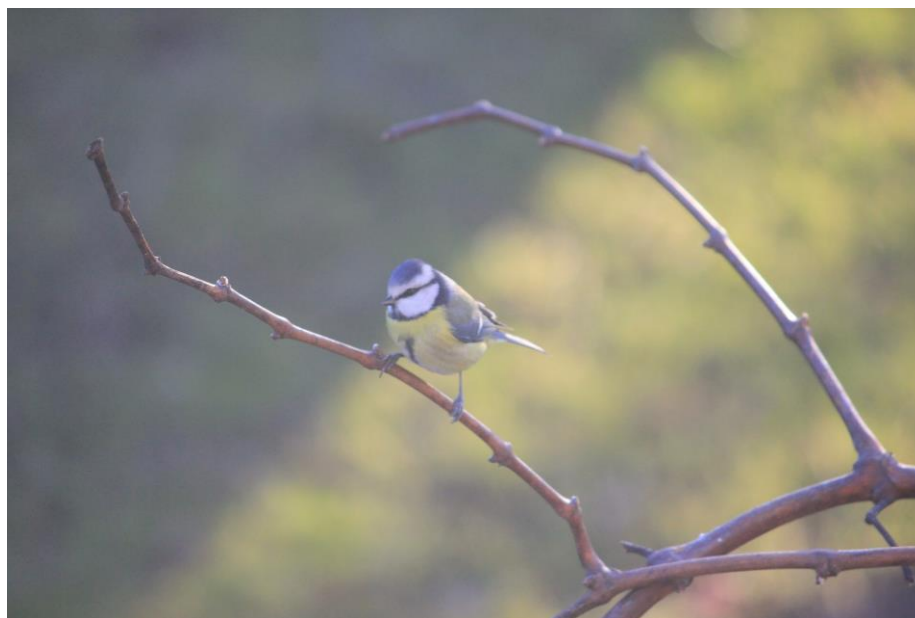

Can live up to 1500 meters high,
Up to 2 brood per year, with 7 to 13 eggs each

Can live up to 12 years old

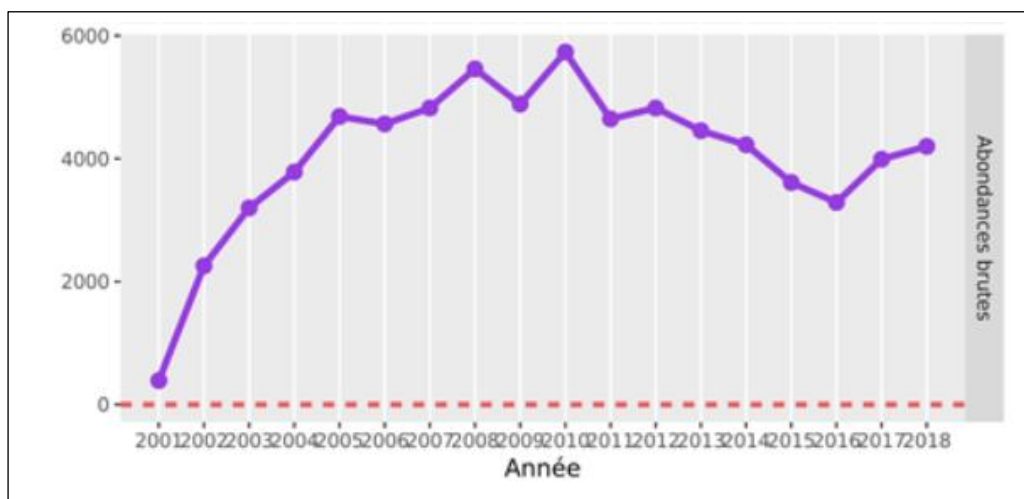

Sparrow family

Protected species since 1981 in

France

Graph about population evolution in France

Graph analyze :

The population of the blue tits was dramatically low at the beginning of the 21th century, but then it increased rather quickly during 10 years to get at almost 6000 birds. From 2010 to 2017 the number of blue tits declined again to reach 3000 birds. Since 2017, after a small rise, the population has been relatively steady
